Experience
untouched nature.

Submontane zone
Meadows and arable land dominate the appearance of the submontane zone today. Just a few remains of deciduous forests still exist, such as the protected linden forests of the Arzler Pitzklamm gorge or the oak forests on the warm southern slopes of the Inn Valley.

6

Montane zone
The Montane zone is characterised by a diverse cultural landscape. Flower-filled and steep mountain meadows are closely intertwined with productive coniferous forests. Near the farm you will often still find meadows with tall old fruit trees.

3

Subalpine zone
The Subalpine zone is dominated by jagged coniferous forests and "knee timber" such as the green alder or mountain pine. The stone pine, the most resistant of the softwoods, characterises the rough tree line. At the Pillar Saddle numerous high and lowland moors also run through the slow-growing mountain forest.

0

Alpine zone
The Alpine zone is the treeless realm of the Alpine pioneer grass. Here, where cows and sheep graze in the summer, you will usually find several metres of snow in winter. Over time, Alpine roses etc. have developed interesting survival strategies.

-1 to -3

Subnival zone
The Subnival zone is largely free of any vegetation and home to some "extremists" including the glacier buttercup. Their altitudinal distribution ultimately ceases at 3,100 m. This is where the "eternal ice" begins.

-3

Nival zone
The glaciers of the Ötztal Alps make up the largest single glacial area in the eastern Alps.

Pleasure+Culture

A surrealist painting featuring a large, dark, textured face with wide, staring eyes. Instead of a mouth, a waterfall cascades down. The face is set against a landscape with rolling green hills, a rainbow arching across the sky, and distant mountains under a bright, hazy sun. The overall style is dreamlike and evocative.
